Agenda

This workshop will include presentations and discussions of the following:

- Overview of the ARFVTP
- Review of a previous June 2014 meeting
- Use of metrics within the ARFVTP
- Use of metrics in similar, non-Energy Commission programs
- Public comment

Background

Since 2008, the Energy Commission has administered the ARFVTP, which allocates approximately \$100 million per year toward projects that, “develop and deploy innovative technologies that transform California’s fuel and vehicle types to help attain the state’s climate change policies..., without adopting any one preferred fuel or technology” (California Health and Safety Code, Section 44272(a)). As of July 2016, the Energy Commission has invested approximately \$638 million through the ARFVTP into more than 550 projects across the state. Common project types include the development, demonstration, and deployment of electric vehicle charging stations, biofuel production facilities, hydrogen refueling stations, natural gas vehicles, and advanced technology trucks.

Assembly Bill 109 (Núñez, Chapter 313, Statutes of 2008) requires a biennial assessment of the projected benefits from program investments such as reductions in petroleum use, carbon emissions and criteria emissions from California’s transportation sector. Meanwhile, Assembly Bill 8 (Perea, Chapter 401, Statutes of 2013) requires the Energy Commission to consider cost, expressed in terms of a greenhouse gas benefit-cost score, when evaluating and selecting projects for funding. In June 2014, the Energy Commission held a workshop to present and discuss these assessments, and how they fit into the ARFVTP’s implementation. Materials from this previous workshop are available online at:

Additional information about the ARFVTP can be found in the *2016-2017 Investment Plan*, available online at:
